Stand by what you sell

BIOSECURITY AND TRACEABILITY - NT

Biosecurity, traceability and the NLIS database - what you need to know ...

The red meat integrity system underpins Australia's commitment to biosecurity and food safety and provides us with a competitive advantage in a global market.

As Australia faces two major animal diseases on our doorstep in Lumpy Skin Disease and Foot and Mouth Disease, there has never been a more important time to ensure we are doing all we can to keep our integrity system strong. Now more than ever we need to ensure we can stand by what we sell.

Join this webinar to:
- Ensure your biosecurity management plan is up-to-date and that you are doing everything you can to protect your livestock and your business.

- Understand how traceability is achieved through the National Livestock Identification System (NLIS) and what you need to do.
- Watch a practical demonstration of the most common action on the NLIS database – a livestock transfer from one PIC to another.

ISC is hosting this webinar in partnership with the NT Government and both organisations will be able to answer questions and supply resources to help you use the integrity system programs.

Date: Wednesday 31 August 2022 | Time: 7.30pm - 8.30pm (ACST)

Register: www.integritysystems.com.au/events

Have you tried the electronic National Vendor Declaration? Here's the benefits ...

eNVD

✓ Answer questions once

✓ Create templates to save time

✓ Can be printed at any time

✓ Can be used on a mobile device

✓ Easy to read, understand and doesn't get lost

✓ $30 discount on LPA accreditation/reaccreditation

Find out more at www.integritysystems.com.au/NVD

> " The updated eNVD system allows you to only answer questions once - the answers to similar questions are automatically applied across the relevant forms. It now takes us only six or seven minutes maximum to complete all the paperwork for each lot, compared to ten to fifteen minutes for each lot using paper versions. That is a huge time saving."
> **George Lubbe, Kerwee Feedlot Operations General Manager**
