

More of the paperwork and systems you use every day are now online, from eNVDs to the way you store and share business records. As agriculture goes digital, knowing how to use these tools properly and protect your business from cyber risks is part of running a modern livestock operation.

These practical ISC webinars are designed especially for producers to cover these key digital technology topics.

Register today at one of the links below:

### eNVD

Wednesday 13 May 2026, 7pm (AEST)

eNVDs can't get damaged, are easy to read and easily filed, plus creating templates makes it easier for regular consignments. And there are multiple ways to share an eNVD with your transporter and others in the supply chain.

Join this webinar to learn:

- How to create an eNVD in the web platform
- How to create an eNVD in the mobile app
- How to share an eNVD – email, SMS, print
- How to add comments, attachments and viewers

### Cybersecurity for producers

Thursday 14 May 2026, 7pm (AEST)

Cybersecurity is becoming an increasingly important issue for red meat producers as more farm operations, payments and traceability systems move online. This practical webinar will explain where the risks are emerging and outline simple steps producers can take to better protect their businesses.

Join this webinar to learn:

- Why cybersecurity matters for livestock producers and the integrity system
- Common threats affecting agricultural businesses
- Where producers may be digitally exposed across farm operations
- Practical actions to reduce cyber risk
- What to do if a cyber incident occurs

Register: [bit.ly/40NNrgh](https://bit.ly/40NNrgh)

All registrants will receive a post-webinar email including a video link to the webinar, a question and answer transcript and other resources.

SA/NT: 6:30pm (ACST) | WA: 5pm (AWST)
